

## **Custom Plexi AC Panel Guide**

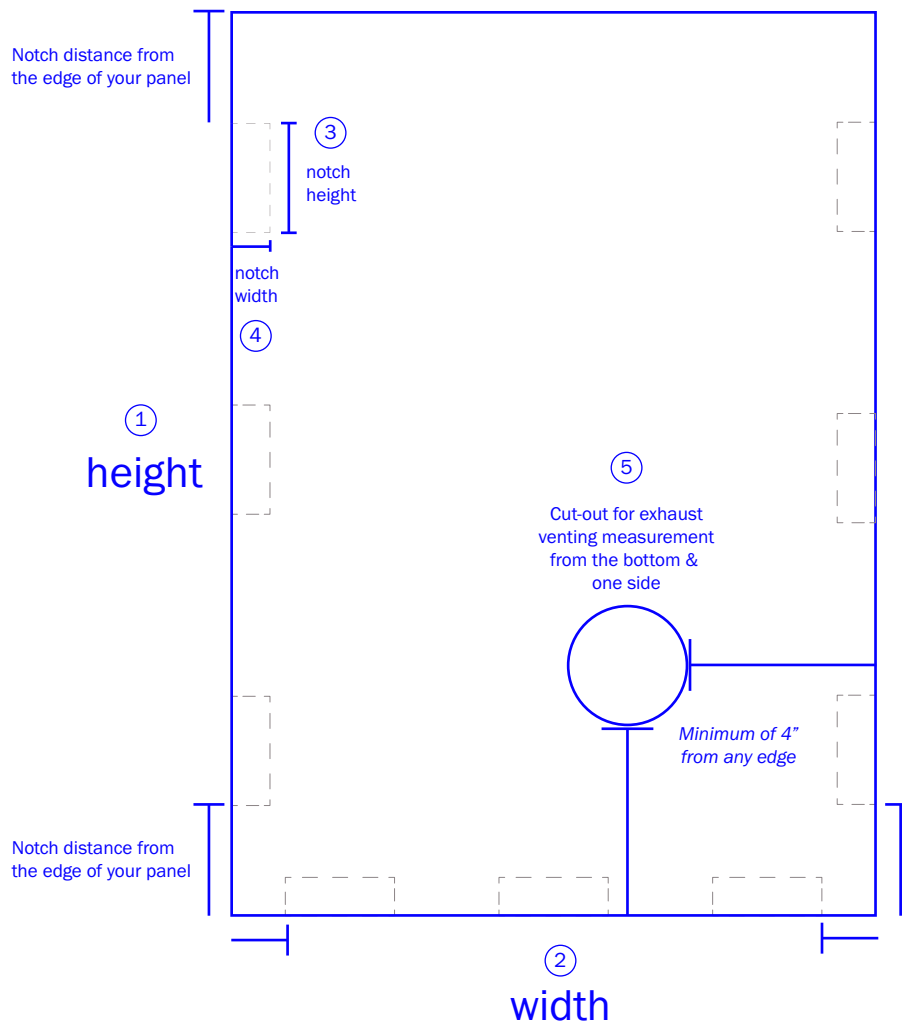

What to Measure

An Example of a Measurement

Vertical Window Template

Horizontal Window Template

# What to Measure

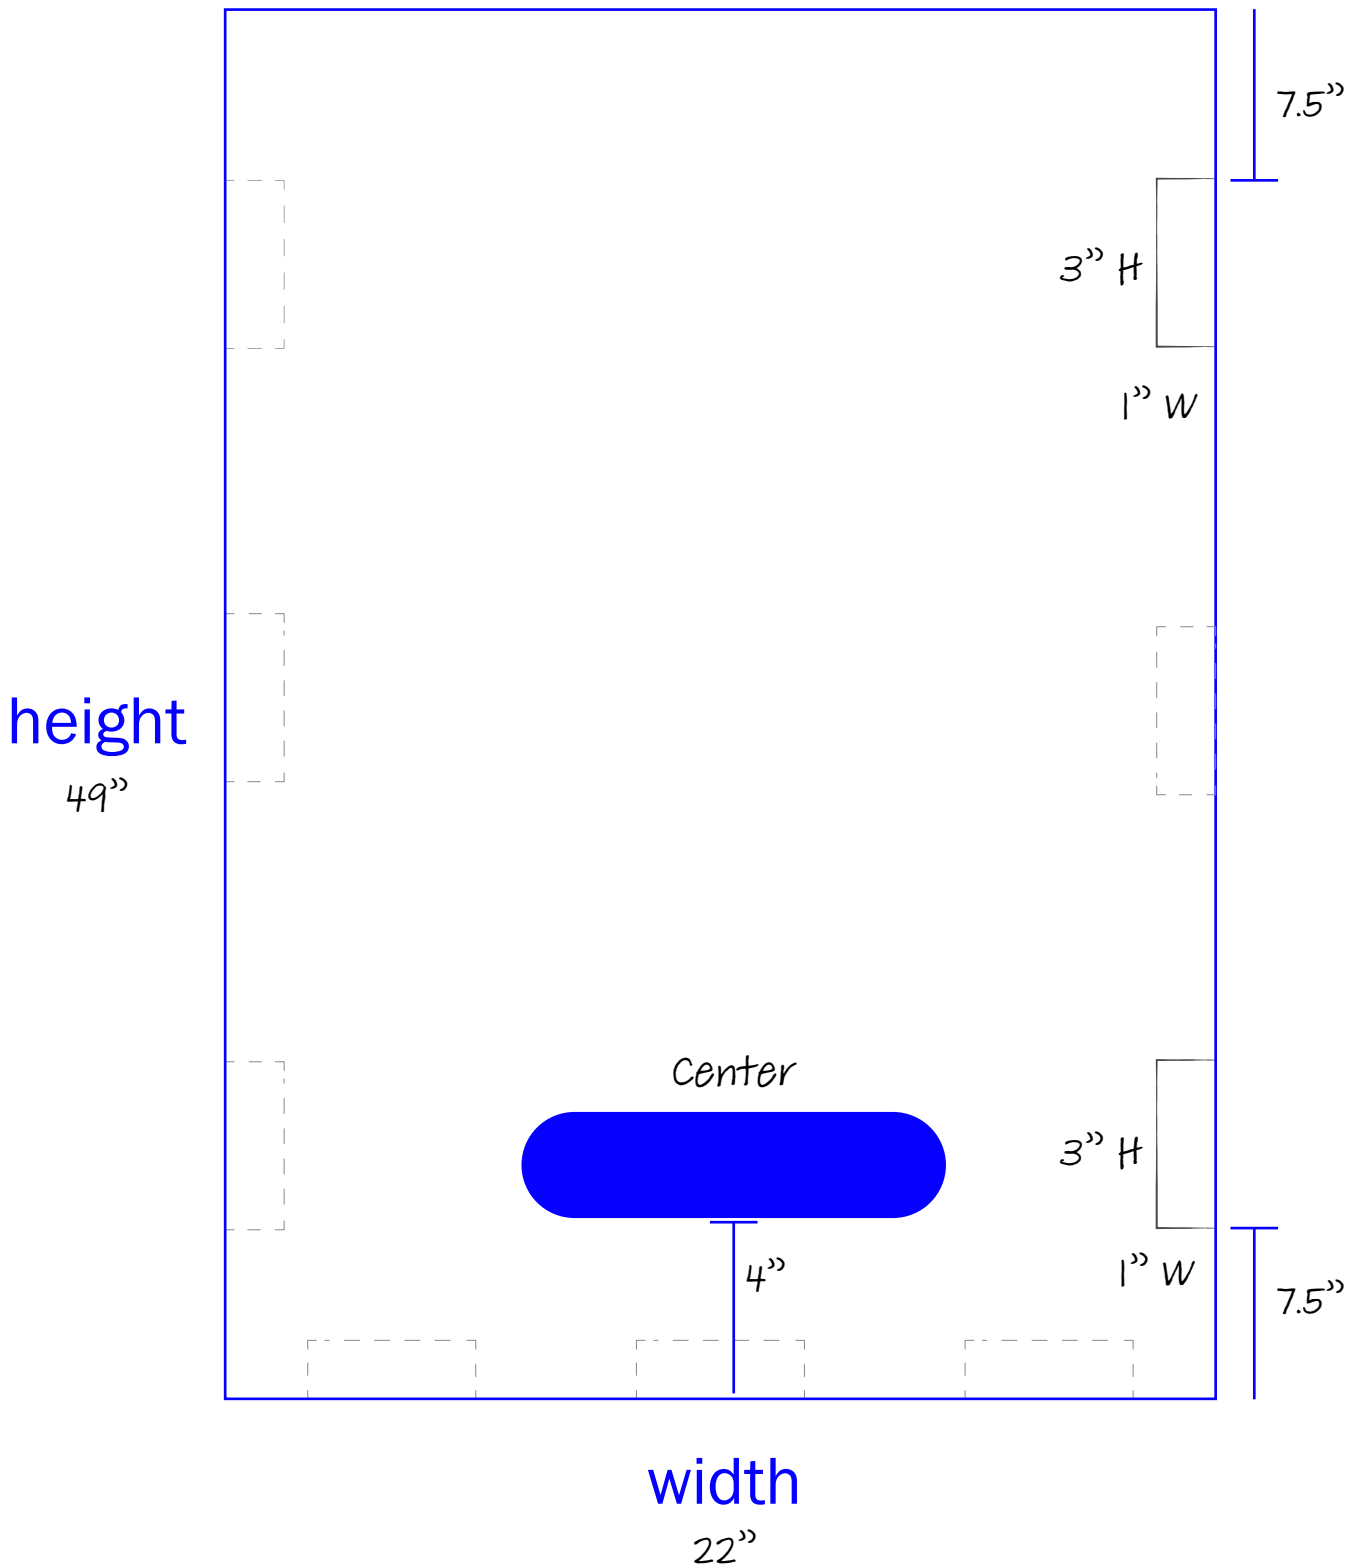

① ② What are the height & width dimensions of your custom plexi AC panel? Your panel will sit against your window frame and will need enough of a border to comfortably receive velcro for an easy and temporary installation.

③ ④ Do you need notches cut around hardware or handles? We cut notches so that your AC panel will sit nice and flush against your window frame.

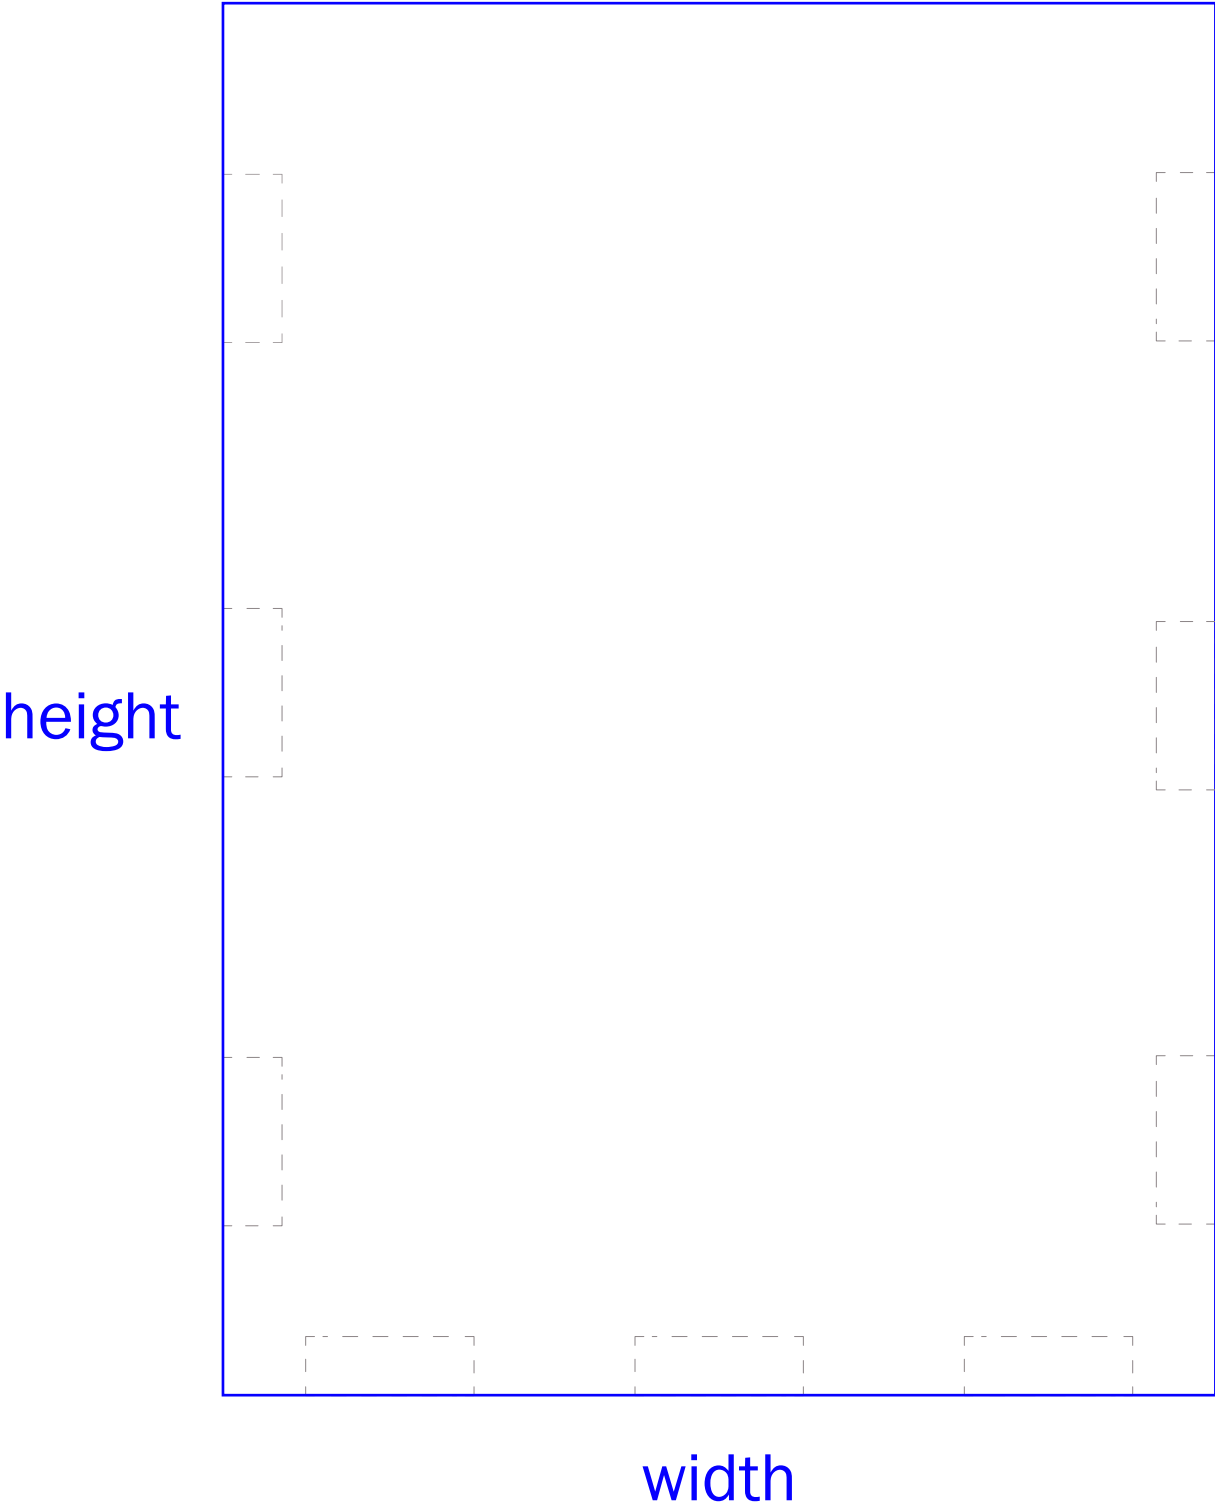

Fill in the dotted lines around the notches you'd like cut. Enter the height & width dimensions for your notches. Remember to add a little wiggle room (1/8" to 1/4") so that the cut-out has some clearance around the hardware. Don't see any latches or hardware? Skip this step!

⑤ Where would you like the cut-out for your exhaust venting? We recommend a minimum of 4" from any edge for a stronger panel. Don't worry about drawing the exact shape. Give it your best shot!

Here's an Example. You've got this!
